

BLEED

Please ensure all jobs have 1mm bleed if required. To determine if bleed is required please see diagrams on this page.

Bleed is required when images, colour or text go right to the edge of your page. To create a bleed simply extend your image(s), colour(s) or text 1mm over the edge of the page

TOP TIP

For a more professional look, keep a quiet border of at least 5mm from the trimmed edge of your artwork, and avoid the risk of essential info being trimmed off.

PLEASE NOTE: If making a PDF for print, please make your PDF page size large enough to incorporate the bleed i.e. if your flyer is A5 with bleed, make your PDF page size A4, etc.
